## PROFESSIONAL SUMMARY

---

Tech Lead and Full Stack Software Engineer with 7+ years of experience, 5 of them in healthtech for Latin America. I design and run production AI systems that classify, extract, and validate medical documents on serverless AWS, and I built the AI-assisted development platform my engineering team uses.

## PROFESSIONAL EXPERIENCE

---

### Healthtech company (Latin America), Guatemala

Jul 2021 – Present

#### *Tech Lead – Audit and Authorization*

Jan 2026 – Present

- Lead the Audit and Authorization team: sprints, capacity, backlog, releases, and incidents for clients in five countries.
- Designed the Document Validation Service, which classifies, extracts, and validates medical documents with LLMs and configurable rules. It has run 48,000+ validations in production.
- Architected Medical Pre-Audit with AI: it cross-checks clinical records against invoices with Claude and Gemini in parallel, with fallback and per-token cost tracking.
- Resolved a production LLM provider outage within hours and caught a pricing error that understated cost by almost 3x.
- Created the internal Claude Code marketplace the team adopted: 14 plugins, MCP servers, and a multi-agent workflow from ticket to reviewed code.
- Built the team's E2E framework: 167 Playwright and TypeScript tests running on ECS.

#### *Full Stack Software Engineer I–III*

Jul 2021 – Dec 2025

- Designed the AI document extraction pipeline (FastAPI and Lambda) on OpenAI, Anthropic, and Gemini, configurable without redeloys.
- Built medical eligibility agents with LangGraph on ECS Fargate.
- Developed Java and Spring Boot microservices and integrations with insurers in Guatemala, the Dominican Republic, Colombia, and Mexico.
- Developed Vue.js frontends for providers, authorizations, and e-prescription, including the launches in Argentina and Brazil.

### G&T Continental Bank, Guatemala

Jan 2019 – Jul 2021

#### *Software Developer*

- Backend development in C++, SQL Server, and MongoDB for enterprise banking.
- Built a broker that exposes internal communications as REST APIs.

## INDEPENDENT PROJECTS

---

- **FIT System, Ministry of Economy of Guatemala** (freelance, 2025): frontend lead and architect. Vue 3, TypeScript, PrimeVue.
- **SIMAP, CICAM (NGO)** (freelance, 2026): project management and monitoring system.
- **FinanzApp** (personal): personal finance app in production, finanzapp.pblpnt.com. Nuxt 4, Supabase.

## EDUCATION

---

### Universidad Mariano Gálvez de Guatemala

Master's in Information Security (in progress)

2021 - Present

B.S. in Systems Engineering

2015 - 2020

## SKILLS

---

- **AI:** Claude, Gemini, OpenAI, LangGraph, LangChain, Langfuse, Claude Code, MCP.
- **Backend:** Java, Spring Boot, Python, FastAPI, microservices, Node.js (personal projects), C++.
- **Frontend:** Vue.js, Nuxt, TypeScript, React (personal projects).
- **Cloud:** AWS (Lambda, SQS, ECS Fargate, S3, API Gateway, RDS), Serverless, SAM, Docker.
- **Data and quality:** PostgreSQL, DynamoDB, Supabase, SQL Server, MongoDB, pytest, Playwright.

## COURSES AND LANGUAGES

---

Spring Boot (Udemy) · Vue.js (Udemy) · Generative AI Fundamentals

Spanish (native) · English (professional)
